

ABSTRACT

A hanging ring used in a curtain by punching from a metal sheet comprises:
a ring body containing a ring piece having a round hole, an extending piece
5 one end of which extends from the ring piece and an extending bar extending
from another end of the extending piece. One end of the extending bar is
pressed as a rivet end for being fixed in a clip. A lateral extending frame is
punched from lateral sides of the enhancing edge and the extending piece.
The lateral extending frame has a non-plane locking ring. A locking hole is
10 punched from the plane locking ring. The non plane locking ring is twisted
through an angle so that it is at different orientation from the other part of
the lateral extending frame. An inner wall of the locking hole is a threaded
wall for locking a screw rod of a decoration.
